

BioReClean[®]

Biphasic Pre-Treatment Cleanser

Removes make-up and purifies in one step

BioReClean[®]

Is an advanced biphasic sanitizing pre-treatment cleanser specifically developed to ensure optimal skin preparation prior to professional aesthetic procedures or daily skincare routines

150 mL for outpatient use

FORMULATION

Its dual-phase formulation effectively combines cleansing and purifying actions, delivering a comprehensive solution that removes make-up, excess sebum, and environmental impurities in a single step.

The formulation is enriched with a carefully selected blend of functional ingredients designed to promote skin clarity and balance. Salicylic Acid supports gentle exfoliation and helps to unclog pores, while lactobionic Acid, a next-generation polyhydroxy acid (PHA), provides a hydrating benefit.

Panthenol and arginine contribute to soothing and conditioning the skin, enhancing softness and comfort after use.

Thanks to its rebalancing and purifying properties, **BioReClean®** helps to refine skin texture, leaving it visibly clearer, smoother, and more receptive to subsequent treatments. The presence of emollient agents ensures effective cleansing without compromising the skin's natural barrier.

KEY BENEFITS:

- Effectively removes make-up and impurities.
- Purifies and rebalances the skin.
- Promotes gentle exfoliation and pore cleansing.
- Leaves skin soft, smooth, and hydrated.
- Prepares the skin for enhanced absorption of subsequent treatments.

APPLICATION

Shake well before use. Apply the product onto a cotton pad or directly onto the skin. Gently massage using circular motions, avoiding contact with the eyes. Remove any residue with lukewarm water or with a moistened cotton pad or gauze. Continue with the usual skincare routine. For optimal results, it is recommended to use it before aesthetic medical treatment and in synergy with **BioReTherapy®** line.
